Speaking of the options, they've retained the ability to adjust the amount of "Contour" and the brush opacity when creating spots. And, the best I've noticed, is that you can now adjust the size of the spot around the center of the circle. You can use the keyboard to move the center with the "X" and "Z" keys. Holding the left bracket key presents various input points in the center of the stroke, allowing you to either create spots on the top, bottom, or in the middle of the lines on the canvas. Using Adobe Photoshop (or Photoshop CC) on your iPad Pro screen is a great experience, and the two physical buttons below the screen are, as they should be, a button press away from Numpad and Touch Bar commands. The buttons press during scanning **and** show when scanning is complete; you do not need to keep your finger hovering over a document. I used Photoshop Elements on the iPad Pro for all of the travel last year. The screen resolution is "normal," but larger than pretty much every other camera or smartphone. I just zoom in until I get what I want. Close up, with the Smart Keyboard off, I can use the iPad Pro's minimal-size screen as a full-size screen with no distortion and no unacceptable scroll bars. In my hand, the tablet feels like a high-end dual-workstation computer, not a mobile device tablet. **Above:** A close-up of how the iPad Pro multitouch screen works with the Smart Keyboard. It's my preferred way to back up and edit images from the iPad Pro. **BELOW:** With the Smart keyboard off, the iPad Pro appears almost as a regular iPad, but on closer inspection you can see that the technology in the screen and screen bezel is iPad-like. The iPad doesn't work this way, but the Apple Pencil does.
