Desktop publishing (DTP) is the process of acquiring a document, embedding the information, and getting that document out to the end-user in the most effective manner possible. In the process of DTP, one must use a software or application that has the capability to support a large number of templates and designs, create shapes and text, and manipulate images on screen. Adobe Photoshop is one of the best DTP applications with the ability to be used within the editor to create and manipulate images for the end user. As always, any program that does such an excellent job in one area is likely to do so for another, and PS is no exception. The biggest change in this update is the appearance of a matrix on the side of the display. You can drag and drop your selections onto a matrix to catalog layers, and layers, in turn, into Smart Objects, which makes it easy to apply edits to multiple layers at once. But it's a big step to take, because it means you lose the ability to view the layers as a single image, the way you can in the tool of your choice. The interface will also be familiar to the CS users: you can place multiple layers one on top of the other in the Layers palette, and you can drag and drop sliders to adjust their opacity. Newer images will be displayed by default in 'Camera RAW' mode, which means you can apply edit in-camera, including using the Adobe lens corrections, the Adjustment Brush, and the Curves and Levels dialog boxes. It's hard to overstate how much better Photoshop is now—and how many things it's able to do. The new Merge to HDR selection option is particularly powerful and much simpler than before. To take a picture right now and then use the Merge feature, click the Window menu and select Merge to HDR. Then open the Layers palette, select and deselect a few images to open the Merge dialog, select the Base Layer that contains the structures you want to keep, and select a destination HDR file. You'll be back to work in a couple of minutes, and even HDR images in the browser can be easily merged thanks to Photoshop's new integration with Creative Cloud.
